SUMMARY

Software Engineer with 3+ years building reliable systems in telecommunications and automotive platforms — environments where downtime isn't an option. Strengths in debugging complex production issues, CI/CD pipeline management (Jenkins, Git, Docker), and Linux engineering. Curious, improvement-driven, and fluent in AI-assisted development workflows. Looking to apply systems thinking to platforms that operate at internet scale.

EXPERIENCE

DevOps Android Platform Engineer

Software Competitiveness International

March 2025 – Present

Athens, Greece

Deliver and maintain the build and release infrastructure powering Android platform integration for automotive infotainment systems, supporting feature delivery across distributed engineering teams.

- Develop and maintain CI/CD pipelines in Jenkins, configuring build parameters and orchestrating job execution to support continuous integration and reliable internal release distribution.
- Participate in code reviews through Gerrit workflow, evaluating changes for quality and integration impact before promotion to feature branches.
- Manage version control across multiple Git repositories, tracking manifest synchronization and performing selective upstream commit integration to maintain stable build state.
- Troubleshoot and resolve build failures and integration issues in collaboration with German engineering teams, driving root-cause analysis across language and time-zone boundaries.

Software Engineer

Software Competitiveness International

April 2022 – February 2025

Athens, Greece

Developed and maintained the operating system of carrier-grade MPLS routers, focusing on feature development and production issue resolution in a system handling high-throughput network traffic.

- Diagnosed and resolved complex production issues through systematic reproduction, root-cause analysis, and patch delivery, ensuring system stability for telecommunications customers.
- Extended the configuration management component to validate, collect, and store hierarchical queue scheduling metrics, contributing to platform observability and performance monitoring.
- Wrote clean, maintainable code in C for a large-scale, performance-sensitive system, navigating an extensive existing codebase and technical documentation to deliver targeted fixes and features.
- Participated in code reviews, architectural discussions, and technical decision-making within an agile development team.

Undergraduate Research Fellow

Distributed Computing Systems & Cybersecurity Lab, FORTH-ICS

September 2019 – July 2021

Heraklion, Greece

Conducted applied research in network protocol analysis and traffic data generation as part of a research fellowship and Bachelor's thesis.

- Designed and implemented a tool for Bluetooth traffic data generation and packet capture, applying software engineering principles to a research context.
- Worked extensively with networking protocols (TCP/IP, UDP) and packet processing techniques (network flow generation, packet filtering), building foundational understanding of high-throughput network behavior.
- Evaluated and applied traffic analysis tools to investigate protocol-level behavior and produce reproducible research outputs.

EDUCATION & AWARDS

Bachelor in Computer Science

University of Crete | GPA: 6.61 / 10

September 2013 – July 2021

Heraklion, Greece

Undergraduate Scholarship

Institute of Computer Science, Foundation for Research and Technology (FORTH)

March 2020 – August 2021

Heraklion, Greece

TECHNICAL SKILLS

Programming Languages

C, Python, Java, Scala, Bash

DevOps & Tooling

Git, Gerrit, Jenkins, Docker, Yocto, Jira, Confluence

Debugging & Analysis

GDB, Wireshark, LaTeX

Operating Systems

Linux, Windows

AI-Assisted Development

Claude, Claude Code (daily use)

Languages

Greek (native), English (C2), German (B1)
